

Prime-counting function from spectral modes: classical zeros (left) $\leftrightarrow$ FRC units-chart modes (right)

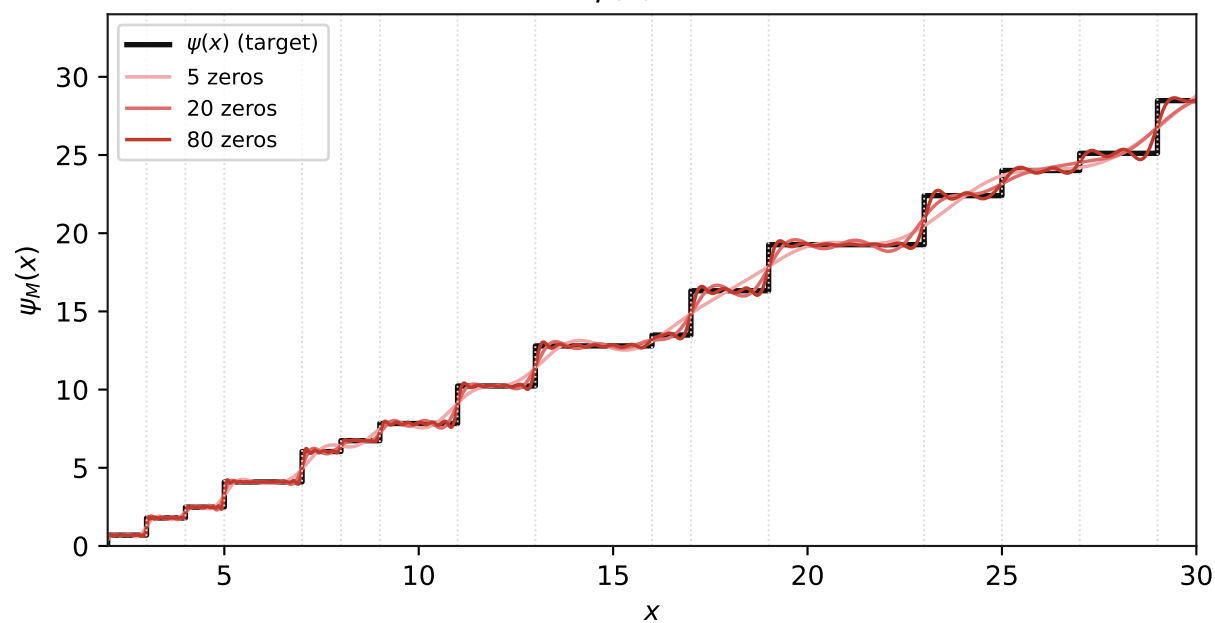

Classical spectral modes: the zeros

FRC spectral modes: units-chart $\frac{\mu(q)}{\phi(q)} c_q$ (antipode $q = 2$ first)

Classical: $\psi(x)$ from M zeros

FRC: staircase from L units-chart modes, $\Psi_L(N) = \sum_{n \leq N} \frac{n}{\phi(n)} R_L(n)$
